

Sean Cooper

IDF Special Forces - CrossFit Athlete – Hockey Player

I have suffered with Plantar Fasciitis in both feet as well as pain and inflammation in my Popliteus muscle which is a deep muscle that runs behind the knee. As an athlete I put strain on all these areas every day in my workouts and playing hockey. My feet hurt particularly when I sprint, and my knee felt pain and was unstable when put under the strain of my arduous CrossFit workouts.

As a Soldier I cannot afford to have problems when I am called into situations that demand top physical performance.

I was fortunate to use the Cell2n PEMF over a period of weeks and felt rapid improvement. In the past several workouts I can honestly say I have had no pain in either foot or in my knee. I was afraid there wasn't an answer as I had gone to many therapist and doctors. I knew I didn't want to have surgery and PEMF gave me the healing I needed just at the right time.

I highly recommend the Cell2n PEMF Therapy.
